Phase 2: Org Setup & Configuration

Objective:
To set up a Salesforce development environment and configure the org for ApexHub deployment.

Activities:

1. **Salesforce DX Setup:**

   - Installed Salesforce CLI and authorized Dev Hub.

   - Configured Scratch Org for isolated development and testing.

2. **Org Configuration:**

   - Created necessary **permission sets** (`ApexHub_Admin`) for admin/developer access.

   - Configured profiles and roles as needed for testing Apex recipes.

   - Enabled **Platform Events**, **Flows**, and **Lightning Web Components** support.

3. **Folder & Repository Structure:**

   - Structured the repo according to Salesforce DX best practices:

     ```
     force-app/ main/ default/ classes/ -> Apex Classes triggers/ -> Apex Triggers objects/
     -> Custom Objects lwc/ -> Lightning Web Components flows/ -> Declarative Flows
     permissionsets/
     ```

4. **Initial Validation:**

   - Pushed a test Scratch Org to ensure all settings are correct.

   - Verified access to standard objects (Account, Contact, Opportunity) and ability to create custom objects (`Recipe__c`, `RecipeLog__c`).

Deliverables:

- Salesforce Scratch Org ready for development

- Permission sets and profiles configured

- Repository structure validated for Apex and LWC development
